To Whom It May Concern:

I'd like to give a sincere and emphatic recommendation to **Harshavardhan Raja**.

Harsh supported Bonsai as a Data Engineering contractor for over 1 year. His work ethic and expertise is only outmatched by his exemplary performance as a teammate and colleague. Harsh excels at handling multiple tasks across a broad spectrum of DE skills. He was our go-to for all things Google Cloud Functions, Cloud Run, Python package / app testing, custom data pipeline automation, BigQuery Data Warehousing, and many more items within our ETL and Reverse ETL stack.

I would recommend Harsh to any data science, data engineering, software engineering, or data analytics firm. He's a great asset to any organization he supports.

Please reach out to me directly if you have any further questions.

Regards,

Matt Butler

CEO, Bonsai
