

Software Engineer - Ads Data

Description

We are looking for **Senior Data Engineers** to join our **AdTech** team and build scalable, high-performance data platforms that power advertising insights and analytics. The ideal candidate will have strong experience in distributed data processing, ETL pipelines, and Big Data technologies, with hands-on expertise in **Spark** and **Scala**.

You will work on designing, developing, and optimizing large-scale data pipelines while collaborating closely with cross-functional engineering teams to build reliable, production-grade data solutions.

Key Responsibilities

- Design, develop, and maintain scalable ETL pipelines for large-scale data processing.
- Build and optimize distributed data applications using **Spark** and **Scala**.
- Develop reliable, high-performance data pipelines for batch and streaming workloads.
- Work with large datasets to ensure data quality, consistency, and performance.
- Collaborate with engineering, product, and analytics teams to deliver robust data solutions.
- Optimize data workflows for scalability, reliability, and cost efficiency.
- Deploy and manage data workloads in cloud and containerized environments.
- Troubleshoot production issues and continuously improve platform performance.

Requirements

Candidates who demonstrate:

- 5+ years of experience in Data Engineering or Big Data Engineering.
- Strong hands-on experience with **Apache Spark** and **Scala**.
- Experience building and maintaining **ETL pipelines**.
- Familiarity with **Google Cloud Storage (GCS)**.
- Experience with **Kubernetes (K8s)**.
- Strong SQL skills and understanding of distributed data processing.
- Excellent debugging, problem-solving, and performance optimization skills.
- Strong communication and collaboration skills.

Good to Have

- Experience with **AWS** and cloud-native data services.
- Familiarity with streaming technologies such as **Kafka**.
- Experience working on large-scale data platforms or AdTech systems.
- Exposure to orchestration tools such as **Airflow**.
